Haitham Mohammed

A respectful self-motivator who is eager to develop in the field of software development.

Personal statement

I am a respectful self-motivator who is eager to develop in the field of software development. I have a deep passion for creating useful products for people that I know will benefit them. I am experienced in troubleshooting issues and have the grit and perseverance to keep going. My goal for the future is to become a well versed individual in the Digital industry and to have made a huge impact on others' lives through software solutions. I am fluent in HTML and CSS and looking to add more to my belt such as a scripting language like JavaScript or a back-end language like Java or Php. I am currently pursuing the AWS Certified Cloud Practitioner certification and looking to become an AWS Certified Developer.

EXPERIENCE

Greenwich Islamic Centre, London — *Volunteer*

July 2021 - July

Volunteer

Greenwich Islamic Centre

During the festival of Eid-al-Adha. My local Mosque organised an outdoor event.

I was placed with a few others on a team to control the traffic. One of the struggles we faced was communication. Many people just wanted to enjoy their day and did not want to wait or let others pass them. Also, the fact that the car park has the same road as an entrance and exit was a great challenge we overcame. An important skill I acquired would be communication. I learnt how to communicate quickly and efficiently to clear the roads as fast as possible.

EDUCATION

Secondary School, London

September 2016 - August 2021

London East Academy
2016 – 2021
7 GCSEs
● English Language – 7

Github Account

https://github.com/haith4m

Referees

Mohamoud Yousuf - (mentor)
mohamoud96@gmail.com

• History – 6
• Combined Science – 7,7
BTec–OCR
2019 – 2021
●BTec Creative iMedia (Level 2) Distinction

PROJECTS

Website — *Auto spare parts Website*

I created a website for my Uncle's Auto Spare Parts Shop in Somalia. I used HTML and CSS. I displayed all of his products. The website can be viewed on my personal Github account. I am currently learning a JavaScript framework (node) so I can add a backend to the website. This website will display my progress as a Developer.
What I took away from this is how to solve problems using online sources
If you want to check out the website:
